

**Kilroy Blockchain Releases Casey Work Safe - Cloud Software Designed to Address Mass Mandate for COVID "Vaccine or Testing" Tracking Requirements**

*Automating a mass mandate for government and other large employers to provide a COVID-safe work environment, including the tracking of vaccine and COVID test status for employees and contractors, putting the process in an easy-to-use system that does not require installation.*

AUSTIN, TX – August 5, 2021: Kilroy Blockchain has announced Casey Work Safe, a new feature of the company's Casey outbreak management system, which provides a way for organizations to track information relative to vaccines and COVID test status.

**About Casey Work Safe**

Casey Work Safe helps enterprises to implement their policies around controlling contagions - specifically making sure that if an employee or contractor is not vaccinated, that they meet whatever other criteria is specified by the enterprise - such as getting a negative result on a weekly COVID test - in order to fully participate in the workplace, or to travel.

With Casey Work Safe, managers can get a list of employees who need intervention, and even schedule outreach to those employees and automate reminders.

Casey Work Safe is part of the blockchain-based Casey outbreak management system, so if it is tampered with by hackers, everyone using the system will be able to tell.

Karen Kilroy, CEO of Kilroy Blockchain, said "The reason we created Casey is to bring our skills to the table to stop COVID. We added Work Safe to Casey so we can step up and help the great many organizations that suddenly need to make sure workers are either vaccinated or tested to come to work or travel."

**About Casey**

Casey, the tamper-evident contagious outbreak management system used in the Casey Health alliance, is Kilroy Blockchain's latest invention that is focused on helping people. Casey is developed specifically for the purpose of helping professionals who help people to avoid or recover from COVID-19. Casey is designed for remote workers, and includes a built-in telephone system.
